PRATHAMESH PAWAR

Fullstack Developer

+918237259495 prathameshpawar06@gmail.com

ABOUT ME

Full Stack .NET Developer with 4.5 years of experience in developing and maintaining web applications using ASP.NET Core, MVC, and nopCommerce. Experienced in building RESTful APIs, developing responsive UI using CSHTML, JavaScript, and React, and integrating third-party APIs. Skilled in end-to-end development including backend, frontend, and database management, and proficient in using AI-assisted tools to improve development efficiency and UI design.

EDUCATION

2020 - 2022
DDU UNIVERSITY

Master of Computer Applications

I completed my MCA from Nadiad, where I specialized in C# programming along with other software development skills. I gained strong expertise in object-oriented programming (OOP), web development, and database management

2017 - 2020
SPU University

Bachelor of Science in Information Technology

I completed my BSc IT, where I specialized in C# programming. During the program, I developed a solid understanding of software development, object-oriented programming (OOP), and database management, which provided a strong foundation for my career in IT.

2012 - 2016
Maharashtra State Board

Higher Secondary Certificate

I completed my HSC with a specialization in Mathematics, where I developed strong analytical and problem-solving skills that laid the groundwork for my future studies in technology and software development.

PROGRAMMING SKILLS

- Programming Languages : C# , LINQ, JavaScript, jQuery , AJAX
- Frameworks : .Net Framework, .Net Core, Entity Framework, .Net Core MVC , Bootstrap , kendo UI, Unit Testing, React
- Version Control : TortoiseSVN , GitHub
- Databases : MSSQL Server , PostgreSQL
- Technology : Visual studio , Visual studio code
- API Development : RESTful APIs, ASP.NET Core Web API
- Methodologies :
  - Agile (Scrum) : Sprint planning, daily stand-ups
  - Waterfall: Requirement analysis, development lifecycle

SKILLS

- Project Management
- Front-End
- Teamwork
- Version Control
- Leadership
- Time Management
- UI/UX Design
- AI-Assisted Development

LANGUAGES

- English
- Marathi
- Hindi
- Gujarati

EXPERIENCE (4.5 YEARS)

Nov 24 - Present
KD Cloud Solution

Software Engineer (1.4 Years)

I work as a Software Engineer (Full Stack .NET Developer), contributing to both frontend and backend development of enterprise applications. On the frontend, I build responsive and user-friendly interfaces using React, while on the backend I design and maintain scalable REST APIs using .NET. I am responsible for integrating and consuming third-party APIs, implementing secure authentication and authorization mechanisms, and managing database operations. I also collaborate with the development team using Git for version control and follow structured development workflows to ensure secure, high-quality, and maintainable code.

Jun 24 - Sept 24
Casepoint PVT.LTD

Associate Software Engineer (0.4 Years)

I work as a Software Engineer, contributing to the company's product development. I handle both frontend and backend tasks using Kendo UI, HTML, and CSS on the frontend, and C# on the backend. We also use Git for version control.

Dec 21 - Apr 24
Xcellence-It

.net developer (2.5 Years)

As a .NET Developer, I work on MVC-based applications, contributing to both frontend and backend development. I have experience with nopCommerce, developing custom plugins based on client requirements and implementing custom project enhancements. I also manage database operations, API integrations, and application deployment, while using SVN for version control.

PROJECTS

- **Square – Real Estate Platform**
  Backend: ASP.NET Core | Frontend: CSHTML, JavaScript
  - Developed and maintained RESTful APIs using ASP.NET Core to support core real estate platform functionalities including user onboarding, verification, and account management.
  - Built and enhanced frontend pages using CSHTML and JavaScript, creating responsive and user-friendly interfaces integrated with backend APIs.
  - Integrated third-party government and financial services such as Nafath for identity verification and SIMAH for credit score validation, along with National ID and mobile verification APIs.
  - Implemented secure authentication and verification workflows, ensuring safe and reliable user registration and login processes.
  - Utilized AI-assisted tools to help generate and refine UI design layouts, improving development efficiency and user interface consistency.
  - Managed API development, frontend integration, database operations, and third-party service integrations, ensuring secure, scalable, and maintainable application functionality.

- **Stockbridge-API :**

Web API (C#) – .NET Core

  - Developed RESTful APIs using ASP.NET Core for the admin side of the Stockbridge platform.
  - Integrated Swagger for API documentation and testing interface.
  - Managed modules including:
    - Policies (creation, expiration tracking),
    - Clients and their addresses,
    - Expired Policies handling.
  - Implemented APIs to generate reports related to policies and staff, supporting export and analytical functions.

- **Stockbridge-Client :**

Front-End (React.js)

  - Built a React-based UI for the admin panel of Stockbridge.
  - Created modular components for listing and managing:
    - Clients, Policies, Staff, Carriers, and Brokers.
  - Implemented dynamic popups for creating:
    - New Clients, Policies, and Templates, enhancing user experience with real-time validations and form controls.

- **Email Sender API :**

Email Automation (Node.js)

  - Developed a Node.js-based API to send emails to configured email addresses.
  - Created customizable email templates using configurable fields (e.g., recipient, subject, body, etc.).
  - Implemented environment-based configuration for email credentials and dynamic content handling.

- **BrainyClock** :

  Front-End Development (React.js)

  - Designed and developed a static website using React.js for displaying company information.
  - Included a contact form to collect and send user inquiries.
  - Created a user signup flow, allowing new users to register and get redirected to the login page.

- **CASEPOINT Product**

  Full Stack Development (C# / HTML / CSS)

  - Customized Kendo UI components for responsive and user-friendly interfaces, enhancing user experience and application performance.
  - Implemented DataTables Search for efficient data filtering, sorting, and pagination in large datasets, optimizing search functionality.
  - Worked with cross-functional teams to ensure smooth frontend-backend integration.
  - Conducted regular code reviews and debugging to maintain code quality and reduce defects.
  - Integrated Elasticsearch and dtSearch for high-performance full-text search capabilities across large document repositories, improving search accuracy and speed.

- **Mobile Service**

  API Development

  - Used Database-First approach with Entity Framework.
  - Migrated the project from .NET Framework to .NET Core to enhance performance and enable cross-platform support.
  - Developed backend APIs for an automobile garage service center booking system.
  - Supported two types of bookings:
    - Garage visit
    - Doorstep service via service van
  - Backend logic for Admin to:
    - Assign service vans and drivers
    - Set availability slots
    - Define kilometer range for each van
  - Users can book only available vans based on selected time slot and location range.
  - Implemented validations and error handling for unavailable slots or out-of-range locations.
  - Built a reward points system:
    - Points awarded on each booking
    - Points redeemable for gifts
  - Focused on clean API design, scalability, and performance optimization.

- **RIO :**
  API Development
  - Designed and developed a billing system API from scratch using .NET Core and Entity Framework (Code-First).
  - Implemented JWT-based authentication and authorization for secure access.
  - Defined role-based access control for Admin, Sales Manager, Salesman, and User.
  - Admin can manage all user profiles, update/delete records, and assign roles.
  - Sales Manager manages Salesmen and Users within their branch.
  - Salesman has access limited to assigned branch only.
  - Handled multi-branch logic with branch-level access control and permissions.
  - Enabled bill generation based on selected products, where products are added by Admin or Sales Manager.
  - Focused on clean API architecture, performance, and maintainability.
  - Fixed critical bugs and ensured high stability and performance across the application.

- **NopCommerce:**

Full Stack Development (C# / HTML / CSS)

  - Developed, customized, and maintained NopCommerce-based e-commerce websites according to client specifications.
  - Created multiple custom plugins to handle tasks like:
  - Displaying custom widgets on the homepage, product details page, and admin site.
  - Overriding methods and utilizing events for data preparation.
  - Implementing action filters for enhanced functionality.
  - Wrote custom code to address specific business requirements and improve site performance.
  - Handled plugin upgrades and downgrades for version compatibility.
